To Whom It May Concern:

I am delighted to recommend Kirill Lysenko for the position of Software Engineer. As the Director of the R&D department at X5 Retail Group, I have been working closely with Kirill Lysenko for 2 years. Kirill Lysenko joined X5 Retail Group as a Middle Software Engineer and quickly distinguished themselves through their proficiency and dedication. Their outstanding performance led to a well-deserved promotion to Senior Software Engineer.

One of the most significant contributions he made was his work on the integration of Antifraud AI into our self-checkout stations. This project detected fraud on self-checkout stations analyzing video stream from cameras. Kirill also designed, implemented and maintained a platform for gathering various statistics and videos from devices for further analyzing by our operators for further improving the work of an AI. This project directly contributed to a 2% increase in revenue in stores where the enhanced self-checkout stations were deployed.

The other significant project was the device for monitoring all of the self-checkout stations in stores. This device is intended for employees in our stores to monitor customer activity on self-checkout stations to help customer if there is a problem, detect even more frauds or confirming customer age if the product the are buying requires it. All of our employees in stores had great pleasure while using these devices.

Furthermore Kirill worked on other projects in our company, such as application for ordering in foodcourt in shopping mall, pricechecker device in stores and so on.

Throughout his years at X5 Retail Group, Kirill consistently exceeded my expectations. He was incredibly productive, often going above and beyond to ensure the success of our projects. Moreover, Kirill Lysenko was a pleasure to work with—approachable, communicative, and always willing to assist team members. All of these traits make him an ideal candidate for the Software Engineer position.

Sincerely,

Eugene Shulyak
